Wingtip Logistics: Fleet analytics cuts fuel cost by 7.4%

Case study | Logistics | Cloud Data Platform (Azure Databricks) + Advanced Analytics & ML

-7.4%	-18%	2.1B / month	22% under
Fuel cost fleet of 3,800 trucks	**Unplanned breakdowns** first 6 months	**Telematics events** processed	**Platform cost** business case

The challenge

Wingtip Logistics runs 3,800 trucks from 42 depots. Telematics data sat in vendor portals and could not be joined with maintenance and route data. Fuel is Wingtip's second-largest cost.

What we did

- Built a telematics data platform on Azure Databricks in 5 months (PRJ-3201, June-November 2025).
- Joined Samsara telematics, SAP maintenance orders and route plans in a governed lakehouse.
- Deployed idling and route-adherence models; in 2026 added predictive maintenance (PRJ-3202).

Results

"For the first time our depot managers see fuel, maintenance and routes in one place. The fuel savings paid for the platform in under a year." - Mei Lin, Director, Fleet Analytics, Wingtip Logistics
